

TUBEX MESH

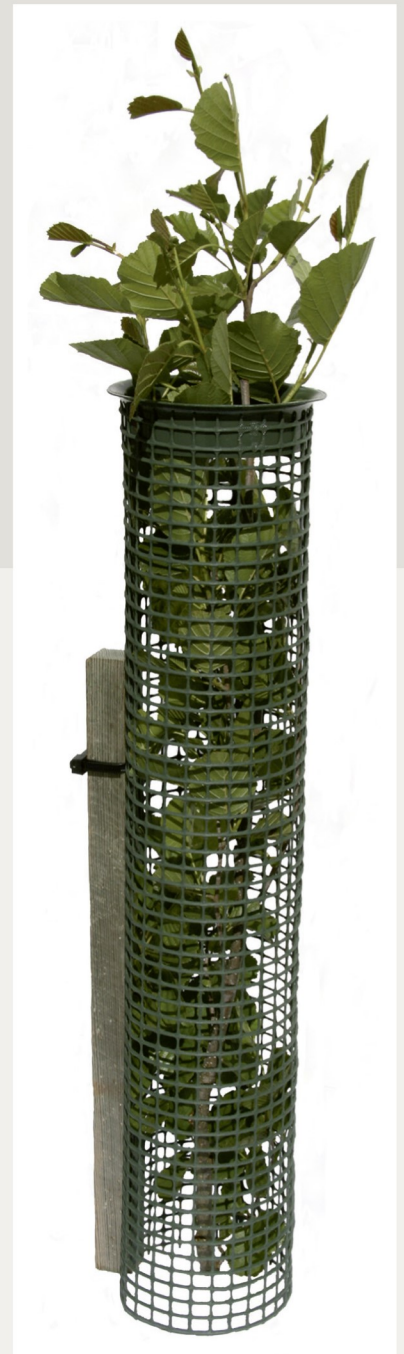

Tubex Mesh is a range of high-quality tree shelters that combines the features of netting with the rigidity of a tube. Its use and installation is very similar to that of any tree shelter.

Ideal for the establishment, training and final development of plants that require greater levels of light penetration.

Provided with a flared top rim to prevent abrasion to the plant stem.

Use of a wooden stake is recommended. Includes releasable ties to attach the mesh to the stake..

SPECIFICATIONS

Recycled plastic with a life span of approximately 7 years
